

If something seems suspicious

- 1 Pause.** Don't click, pay, approve, install, or share anything yet.
- 2 Verify independently** with a contact you already know, never the details in the request.
- 3 Report** anything you can't verify.

If something has already happened

- 1 Stop** the risky activity.
- 2 Report immediately:** what happened, when, and what may be affected. You don't need proof.
- 3 Preserve** messages and timestamps. Don't delete, wipe, or investigate.
- 4 Follow** responders' instructions.

Report these right away

- A lost or stolen device, even if encrypted
- An MFA prompt you didn't start
- Files shared with the wrong people
- Ransomware messages or malware alerts
- Unusual access or account activity
- Credentials entered on a suspicious site

Who to contact

For	Contact
IT help and general support questions	ithelp@synozur.com (published IT support address)
Security issues, including suspected security incidents	security@synozur.com
Urgent or after-hours incidents	[TO CONFIRM BEFORE RELEASE: urgent and out-of-hours reporting route]

Use security@synozur.com for security issues. The IT help address is for IT support and general questions, not a confirmed 24-hour incident hotline. An urgent or after-hours reporting route is still pending confirmation. If your email or chat account may be compromised, use an independently verified alternative.

Leave to authorized responders: wiping devices, revisiting suspicious sites, confronting anyone, and contacting clients or authorities about an incident.
